**PROTEUS PCB Design (Level 1, Level 1+)** ..... \$479/\$649

Entry level for Proteus PCB design, limited in terms of both functionality and pin count.

- Full feature schematic capture with support for hierarchical design, bus pins, configurable bill of materials and more.
- Netlist based PCB layout with support of up to 16 copper layers, 10nm resolution, any angle component placement, full electrical and physical design rule checks and much more.
- Standard version of integrated auto-router
- Support for one shaped based ground plane per layer.
- Component libraries containing over 8000 parts
- 1000 pin capacity in Level 1; 2000 pin capacity in the Level 1+.
- Interactive Circuit Simulation.

**PROTEUS PCB Design (Level 2, Level 2+)** ..... \$999/\$1599

These products are restricted in terms of pin count only and include the same set of features as the top of the range Level 3.

Extra functionality over Level 1 includes:

- Automatic Component placement- this tool will automatically place the component specified in the netlist onto the board.
- Rip up and retry autorouting. This enables the router to achieve 100% completion on many boards.
- Unlimited shape based ground planes per layer.
- Automatic gateswap optimisation
- 1000 pin capacity in Level 2; 2000 pin capacity in the Level 2+.

**PROTEUS PCB Design (Level 3)** ..... \$1999

This is the top of the range package and offers all system features plus unlimited design capacity.

**PROTEUS PCB Design Starter Kit** ..... \$249

Starter version: offers same functionality as PCB Design Level 1 but has a design capacity of **500 pins only**. Includes the Basic version of the ProSPICE simulation engine providing a complete entry-level professional package. **Upgrade to higher levels for the price difference only.**

**Advanced Simulation Function** ..... \$319

The Advanced Simulation module integrates seamlessly into Proteus PCB Design providing a complete design environment. Includes over a dozen graph based analysis types.

## Shape Based Autorouting with Proteus

Proteus includes a fully integrated shape based autorouter **at no additional cost** with all versions of our professional PCB Design software.

The router uses a multi-pass cost-based conflict reduction process to find a routing solution which adapts to the natural flow of the nets. Adaptive routing algorithms are now regarded as the most effective way to reach high completion rates whilst also giving results which are often hard to distinguish from manual routing.

- True shape-based gridless autorouter.
- World class performance with adaptive cost-based algorithms to maximise completion rates.
- Fully integrated with the ARES Professional Layout package.
- Works seamlessly with ARES Design Rule Manager and Net Class configurations.
- Routes SMD devices on both sides.
- Supports blind and buried vias.
- Post autorouting clean-up optimization.
